Dear Dr. Wang Xiaowen,

Re: Letter of intention for “Application and development of transparent nano coatings with heat insulation and self-cleaning properties on glass” Project

I hope this message finds you well. We are keenly interested in your “Transparent Nano Coating” products and would appreciate any additional details you can provide. We are exploring the possibility of conducting experimental trial applications in our village restoration projects, where we have recently introduced new glazing and skylights.

Our village revitalisation projects in Mui Tsz Lam, Kuk Po and other Hong Kong villages are government-funded by the Countryside Conservation Funding Scheme (CCFS), and the authorities are actively seeking new sustainable technologies to incorporate into these initiatives. If there is an opportunity for your company to provide real-life applications within one or more of our village projects, we would be thrilled to discuss this further. Successful demonstration for effective usage and performance will lead to wider applications in ongoing and future projects.

Thank you for considering our request. We look forward to your response.

Best regards,

Thomas CHUNG
